

# Maestro\*TECHNOLOGIES Positioned for Future Growth

## 25 YEARS

The company relies on the expertise and experience of all its employees to serve its over 500 customers and more than 5000 users.

## CONSTANT EVOLUTION

maestro\*erp gives customers the power to improve their business processes, make better decisions and have real-time access to critical information.

## R&D

maestro\*erp continues to be a leader in this market through continued investment in R & D and strong relationships with its customers across multiple segments of the construction industry.

Move into new corporate headquarters almost doubles the square footage in anticipation of continued growth.

Varennes, Quebec, August 2014. As a leading supplier of construction management software, maestro\*TECHNOLOGIES recently opened its new corporate headquarters. Located within walking distance of its previous headquarters, this new location offers almost double the square footage in anticipation of its continued growth.

Occupying the entire third floor of a newly constructed building complex at 1625 Lionel Boulet in Varennes, Quebec, Maestro\*TECHNOLOGIES' new office space is the perfect hub for what will be considerable expansion of its services, operations and Research & Development teams.

"Our previous head office had served its purpose," said Robert Meunier, President at Maestro\*TECHNOLOGIES, "we had reached a phase where our employees were working in real cramped quarters. We're thrilled with this new place and we look forward to developing and showcasing our innovations right from where we develop them."

Prio Construction managed the construction of the building, for which they prioritized several ecological choices such as white roof, low-flow toilets, CO2 sensors (ventilation), switch / motion sensor, and glass efficiency energy.

With the economy in North America rebounding, construction activity has picked up considerably in many geographical areas. With this activity comes the need for construction companies to better manage their daily operations, from bid to build, in order to ensure their projects are built on time, within budget and profitable. Maestro\*TECHNOLOGIES, with its 25 year history and over 5000 users, is well positioned to benefit from the anticipated increased demand for leading edge construction management software to help companies better manage their own growth.
