SPIRIA

Press Release  
For Immediate Release

## Maestro and Spiria, in collaboration with Oriso, launch Sentinel – a free online questionnaire to help monitor COVID-19 symptoms among construction workers.

**Montreal, May 7, 2020** - It is with great pride that [Maestro](#) and [Spiria](#), in collaboration with [Oriso](#), announce a new online questionnaire ([Sentinel](#)) to facilitate the validation of construction workers' health status. This measure is now a mandatory requirement implemented by the [CNESST](#) for all construction sites (and all other work places) in Quebec and is a highly recommended guideline by Ontario public authorities for all construction site workers and visitors. This type of questionnaire will likely be implemented across construction sites nationwide and possibly even in office environments and other industries as public officials look for practical solutions to help monitor COVID-19 spread.

### **Helping Canadian construction businesses safely reopen.**

Sentinel will allow each employee (or visitor) at a construction site to report their health situation daily –quickly and easily – right from their smartphone, tablet or computer. The data will be directed to the employer and then compiled for the purpose of ensuring effective monitoring and, ultimately, the safety of all workers. Simple to use, all that will be required is for companies to create a profile, register employees, and the system is ready for use.

Sentinel is available online, free of charge, to all construction companies.

### **Contributing to the industry; a universal and free platform.**

This three-company initiative is a joint contribution to the industry, at a time when everyone needs to work together and support each other. By working closely together, this partnership was able to move quickly and provide a solution that takes full advantages of the technologies available today to remove the need to exchange paper questionnaires in this COVID-19 environment.

### **About Maestro Technologies**

Based in Canada, Maestro is a recognized leader in providing software solutions to all sectors of the construction industry and has carved out an enviable position within the Canadian market. It is widely recognized for its active involvement in the community and its willingness to support entrepreneurs in harnessing the power of digital transformation to increase their company's productivity and competitiveness. With over 10,000 users across the country and growing, Maestro continues to focus on technologies and innovation to offer the most advanced project management and accounting platform in the industry by centralizing all your information management needs in a single software solution.

### **About Spiria**

Powered by a passion for technology since 2003, Spiria designs and develops tailor-made digital solutions for companies at the forefront of their industry who want to optimize their operations, offer more added value to their customers and generate growth through digital transformation. . Their experience and know-how, acquired through the development of more than 1,400 projects in multiple sectors of activity, allow them to have the confidence of large-scale companies like Autodesk, Acosta, Broadsign, Caterpillar, Lightspeed, Hewlett-Packard, Shutterstock and many others. Its 150 experts are spread over three Canadian production centers: Montreal, Gatineau and Toronto.
